## Drinking Water Lab Services

Call: (907) 434-2003

Hours of Operation: Mon-Fri 8am-4pm

### What services does the lab provide?

The lab offers bacterial testing for public water systems in the Norton Sound/ Bering Straits Region. Water samples are tested for coliform bacteria contamination. The lab does not test for other contaminants.

### Can the lab test private wells?

#### Sources for private individual wells:

Not yet. OEH hopes to have coliform bacteria testing for private wells and traditional drinking water in the future.

Keep in mind, drinking water should be tested for more than bacteria! Contaminants like nitrates, organic lead, and copper are some common contaminants.

### Will the lab offer other testing?

OEH does not plan to expand testing services beyond coliform bacteria. Other testing is significantly more complex and cannot be supported in our lab.

### How long before test results are ready?

#### Does it cost?

It takes a minimum of 24-48 hours for finalized results. OEH charges \$25 per sample to cover base expenses.

### How can my community utilize the lab?

Check to see if your public water system has existing contracts with other labs. Services with other labs may be pre-negotiated, submit a 30-day written notice of intent to utilize the OEH lab services to get signed off.
